CONDUCTIVE BINS, HANGING SYSTEMS & RACKS

Conductive Ultra Stack Bins and Dividers

Protect your electronic components from typical electromagnetic interference (EMI), electrostatic or induced fields with these conductive polypropylene bins. The conductive material provides a barrier which these fields cannot penetrate and prevents the build-up of electrostatic charge. Bins are permanently conductive and are unaffected by washing with normal cleaners. Molded from a carbon filled copolymer polypropylene material with an electrostatic decay rate at less than 0.1 second that meets military specification Mil-B-81075B. Its surface resistivity is less than 10^5 Ohms-per square. Easy access to stored items with hopper front bin and label holder provides fast identification. Reinforced side walls and wide ledge allow high stacking on benches or shelving. Be sure all units are properly grounded according to your use. Color is Black.

CONDUCTIVE SHELF BINS & DIVIDABLE CONTAINERS

Conductive Shelf Bins

Protect your electronic components from typical electromagnetic interference (EMI), electrostatic or induced fields with these molded, carbon-filled, copolymer polypropylene bins. Surface resistivity is less than 10⁵ Ohms-per square. Easy access to stored items with hopper front bin and label holder provides fast identification. The conductive material provides a barrier which these fields cannot penetrate and prevents the build-up of electrostatic charge. Bins are permanently conductive and are unaffected by washing with normal cleaners. Be sure all units are properly grounded according to your use. Color is Black.

WIRE SHELVING

Wire Shelving System Finishes

Genuine Quantum modular wire systems offer a unique combination of shelf and post sizes in a variety of finishes to compliment any application. The split sleeve and grooved numbered posts allow for easy and quick assembly. The all welded shelf construction is supported with architectural wire trusses to provide between 600 lb. and 800 lb. capacity per shelf.

Proform - is an economical solution for high humidity or wet applications. The carbon steel is treated with an iron phosphate base. A hybrid epoxy with an antibacterial agent is electrostatically applied over the treated surface. Color: Light Green

Chrome - is a plating process which deposits hard chrome over a nickel surface. This process is very durable and is used in an up-front storage or material handling application in any dry storage environment.

Endurance - is a newly developed process which exceeds conventional finishes with a lifetime warranty. Finish is excellent for high humidity or corrosive applications and is fortified with an anti-bacterial agent. Color: Blue

Stainless Steel - 304 Stainless with an electropolish finish represents the highest industry standard in the prevention of corrosion. This finish is highly effective for corrosive or clean room environments.

Solid Shelf Starter and Add-On Kits

Solid shelves are a solution where dirt, dust and spills are a potential issue. The solid flat surface allows for storage from small to large items and the marine edge perimeter prevents spillage. The double hemmed 18 gauge galvanized steel gives the solid shelf excellent strength characteristics. All solid shelf units consist of 4 shelves and 4 posts. Add-on units consist of 4 shelves, 2 posts and 8 shelf clamps. Additional shelves may be purchased separately, see chart on page 89. Mobilize starter shelving unit using optional mobile kit, WR-00 or WR-00H available on page 123. Units with Add-On kit cannot be made mobile.
