Every year, thousands of workers become sick from exposure to heat. Heat illnesses like heat stroke and exhaustion are preventable. To help you understand heat illness and protective measures, download the **FREE Heat Safety app** from the Occupational Safety and Health Administration (OSHA): [https://www.osha.gov/SLTC/heatillness/heat\\_index/heat\\_app.html](https://www.osha.gov/SLTC/heatillness/heat_index/heat_app.html)

The app calculates your **worksites heat index**, and displays a **risk level** to outdoor workers based on your inputs. It also provides reminders about **protective measures** needed to prevent heat-related illness.

### A. BW Clip™ Single-Gas Detector

Operates up to three years maintenance free: just turn on the device and it runs continuously — no need for calibration, sensor replacement, battery replacement or battery charging. That means great reliability and no downtime. Plus, with the two-year BW Clip™ for H<sub>2</sub>S or CO, you can put the device in a hibernation case when you're not using it for a week or more — and extend its life by that period of time. Compatible with both the MicroDock II and the IntelliDoX instrument management systems, the BW Clip™ is engineered to the highest standards of quality and reliability, keeping you safe and compliant.

- Maintenance-free: no sensor or battery changes necessary
- Compact, lightweight design with one-button operation
- Configuration of alarm set points and more — before activation and throughout the lifespan
- Designed for a range of harsh environments and extreme temperatures
- Hibernation mode with case accessory
- Automated self-test of battery, sensor and electronics
- Wide-angle flash, which alerts simultaneously with audible and vibrating alarm
- Automatic logging of the 35 most recent gas events
- Compatible with MicroDock II and Fleet Manager II software
- Enhanced capabilities and configuration when used with IntelliDoX
- Affordable, with low cost of ownership

## INTELLIDOX

### B. IntelliDoX Automated Instrument Management System

The IntelliDoX system combines smart docking modules and Fleet Manager II software to provide automated instrument management for the BW Clip™, helping you drive productivity, reliability and efficiency. Place the BW Clip™ in the docking module, and it automatically tests the gas detector and sensors while transferring data to your computer.

Quicker bump tests for better productivity. Bump as many as five BW Clip™ detectors in less than a minute. That means no more queues of workers waiting to test their detectors.

Flexible configuration to meet changing needs. Configures the high and low alarm set points — plus other parameters — throughout the BW Clip™ lifespan. So you can rely on your detector to always work the way you want. Efficient networking and data transfer for easy record-keeping. Use either USB or Ethernet to transfer bump tests, peak exposures and other gas-detection data.

- Automated detector testing, configuration, updates and record-keeping support for the BW Clip™
- Expandable to five modules, each with its own LCD screen and keypad for independent operation
- Enhances productivity by performing different functions for up to five BW Clip™ detectors, all at the same time
- Industry-leading fast bump test to eliminate bottlenecks, while preventing costly purge cycles that waste gas
- Easy setup in under two minutes with no tools required
- Connects via Ethernet to network PCs
- USB transfer of dock module settings or detector data
- Easy identification of specific dock modules on the network, so settings can be updated
- Transfers a log of the 35 most recent gas events for each BW Clip™, including exposures, alarm levels, bump tests and more
- Simple reporting to demonstrate compliance and safety
