

TiltLift Series

The Autoquip TiltLift Series provides the functionality of a traditional lift and tilt lift in a more affordable package. This unique product can both raise and tilt parts baskets and bins to an optimal ergonomic position for safer and easier access. These compact and easy-to-use lifts feature a small footprint and a minimal lowered height, so they can easily fit into any workflow environment. The TiltLift is field proven, with hundreds of units installed, and is the most affordable and dependable ergonomic solution available.

TiltLift Series

KEY FEATURES

- **Gibbed/Trapped Rollers in Base** - no unexpected raising of table or legs
- **Lifetime lubricated bearings** - extended lift life
- **Up to 45 degrees of Tilt** - extended lift life, with lesser deflection
- **Internal or Remote Power Unit** - more flexibility
- **Super Torque Motor** - speed, power, and durability
- **Meets ANSI MH29.1** - meets all relevant codes to insure a well built and safe lift

PRIMARY BENEFITS

The Tilt Lift integrates both tilting and lifting mechanisms into a single, compact design which combine to create an effective ergonomic work station – tilting the work towards the worker as a bin or basket of parts is raised during picking to reduce bending and reaching. This unique combination of functions is accomplished more inexpensively and in less total collapsed height than by stacking a stand-alone tilter on top of a stand-alone scissors unit.

SPECIFICATIONS
